Melksham, SN12 7RP, UK

PERSONAL STATEMENT

From an early age I've always been interested in computing. It was my Dad introducing me to a computer system at home that first sparked this interest. I can always remember the feeling of wanting to know just how computers worked, why they worked and what else they could do.

This interest never left me and with every new discovery I made I became more interested particularly in Servers and Linux. From setting up my first C panel to seeing the wonders of Virtualisation with Solusvm OpenVZ for the first time, computers have left me fascinated with just how much power yet mystery they hold.

The courses I chose to study have all helped me to develop both myself and my understanding of the subject. while Computing has given me a greater insight into the business aspects of the IT industry. My interest in computing has not been restricted to work and college life. Within the last 1 Year I've used the knowledge that I've gained over the past 10 years to help some Companies and Business's with their issues from Fixing C panels, Solusvm issues to Integrating their billing system (WHMCS) With their main website's theme's.
